2.2mm Headless Compression Screw

Designed for small bone fractures and fracture fragments fixation, 2.2mm Headless Compression Screw is a member of the HCS family. Having, 2.4mm distal area thickness and size options up to 21mm, the screw is designed for phalangeal, carpal, radial head, metacarpal head and proximal pole scaphoid fractures.

As an important feature, cannulated design, provides the surgeons an easy application over a 0.8mm guidewire.

- Made of certified Titanium Ti6AL4V Eli alloy.
- Proximal Width: 2.4mm
- Distal Width: 2.2mm
- Kirshner Wire: 0.8mm

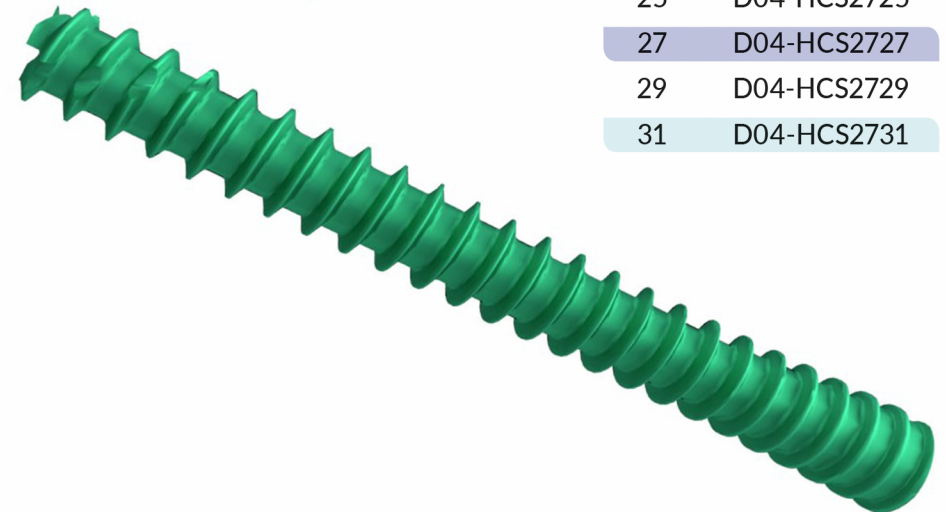

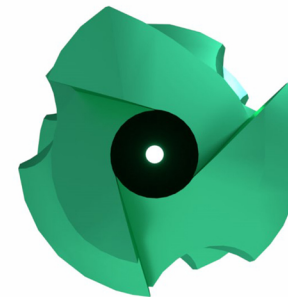

Holes	Ref. No.
11	D04-HCS2211
13	D04-HCS2213
15	D04-HCS2215
17	D04-HCS2217
19	D04-HCS2219
21	D04-HCS2221

2.7mm Headless Compression Screw

Another member of the HCS family, 2.7mm Headless Compression Screw is designed for small bone fractures fixation and joint fusions. With 3.0mm distal area thickness and length options up to 31mm, the screw is intended to be used in radial styloid fractures, radial head fractures, carpal fusions, MCP fusions, scaphoid fractures and nonunions, phalangeal fractures and avulsion fractures.

As an important feature, cannulated design, provides the surgeons an easy application over a 0.8mm guidewire.

- Made of certified Titanium Ti6AL4V Eli alloy.
- Proximal Width: 3.0mm
- Distal Width: 2.7mm
- Kirshner Wire: 0.8mm

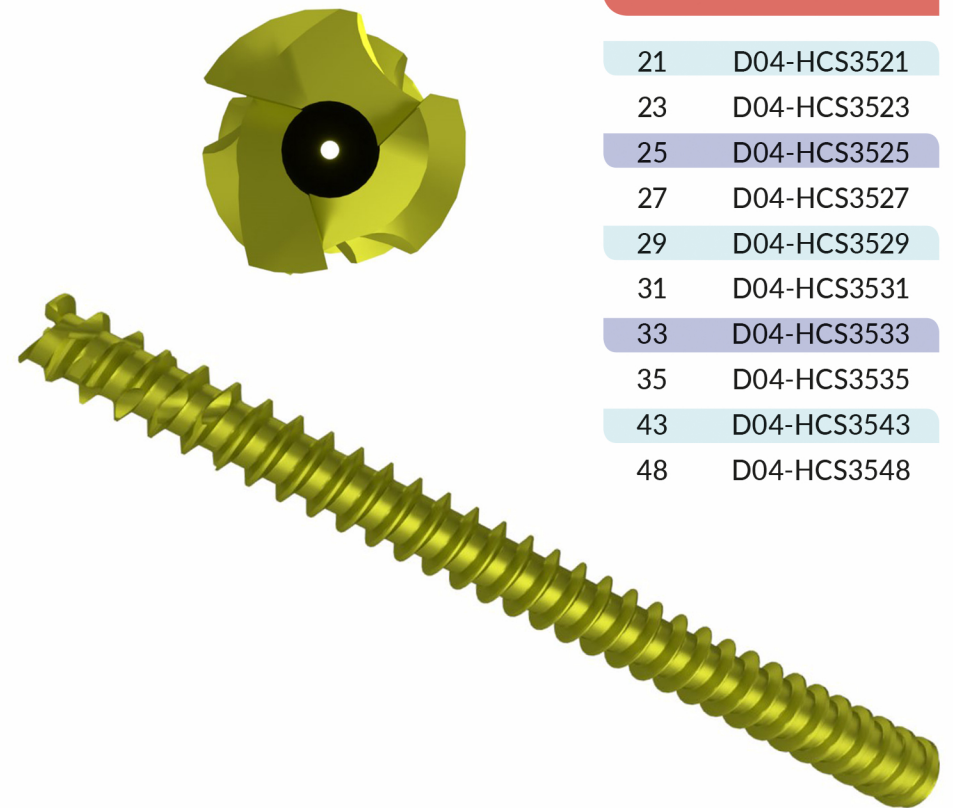

Holes	Ref. No.
15	D04-HCS2715
17	D04-HCS2717
19	D04-HCS2719
21	D04-HCS2721
23	D04-HCS2723
25	D04-HCS2725
27	D04-HCS2727
29	D04-HCS2729
31	D04-HCS2731

3.5mm Headless Compression Screw

3.5mm Headless Compression Screw is designed for small bone fractures fixation and joint fusions. Capitellum fractures, navicular fractures, scaphoid fractures and nonunions, 5th metatarsal fractures, MCP fusions, carpal fusions and bunions are the areas that 3.5mm HCS are intended to be used in. The screw is available with up to 48mm length options and 3.7mm proximal area thickness.

As an important feature, cannulated design, provides the surgeons an easy application over a 1.0 mm guidewire.

- Made of certified Titanium Ti6AL4V Eli alloy.
- Proximal Width: 4.1mm
- Distal Width: 3.5mm
- Kirshner Wire: 1.0mm

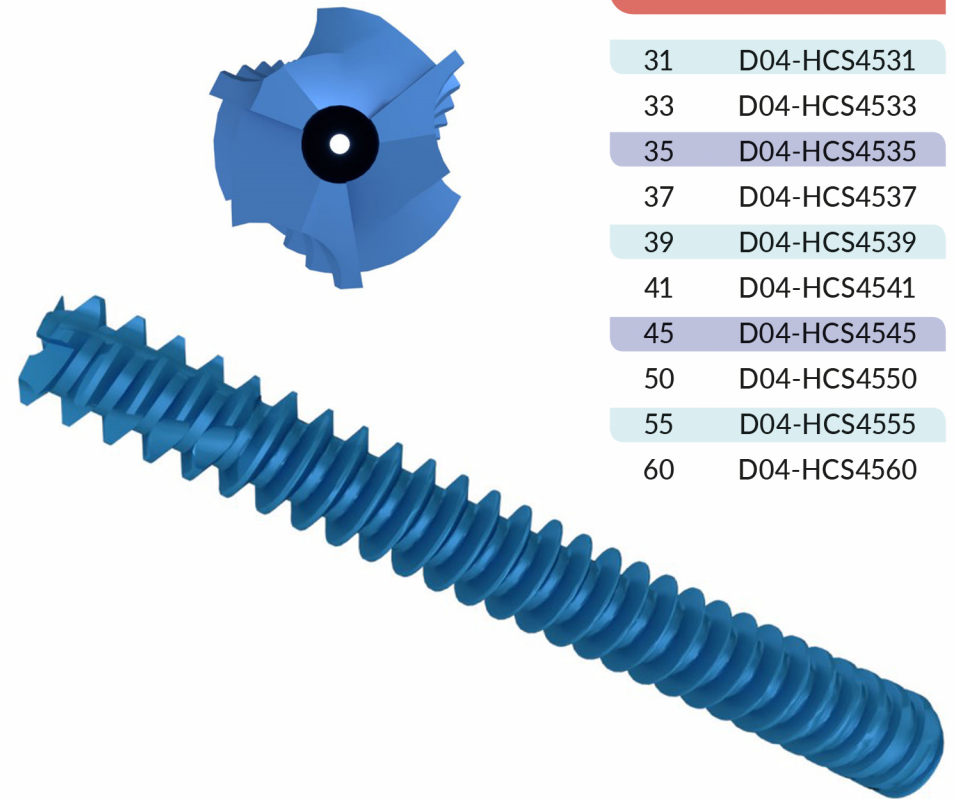

Holes	Ref. No.
21	D04-HCS3521
23	D04-HCS3523
25	D04-HCS3525
27	D04-HCS3527
29	D04-HCS3529
31	D04-HCS3531
33	D04-HCS3533
35	D04-HCS3535
43	D04-HCS3543
48	D04-HCS3548

4.5mm Headless Compression Screw

With 10 different length options up to 60mm, and 4.7mm proximal area thickness, the screw is designed for talus fractures, distal radius fractures, malleolar fractures, Jones fractures, greater tuberosity fractures, radial styloid fractures, capitellum fractures, tarsal fractures, scaphoid fractures and nonunions, OCD repair and osteotomies, midfoot fusions and MCP fusions.

As an important feature, cannulated design, provides the surgeons an easy application over a 1.2mm guidewire.

- Made of certified Titanium Ti6AL4V Eli alloy.
- Proximal Width: 4.7mm
- Distal Width: 4.5mm
- Kirshner Wire: 1.2mm

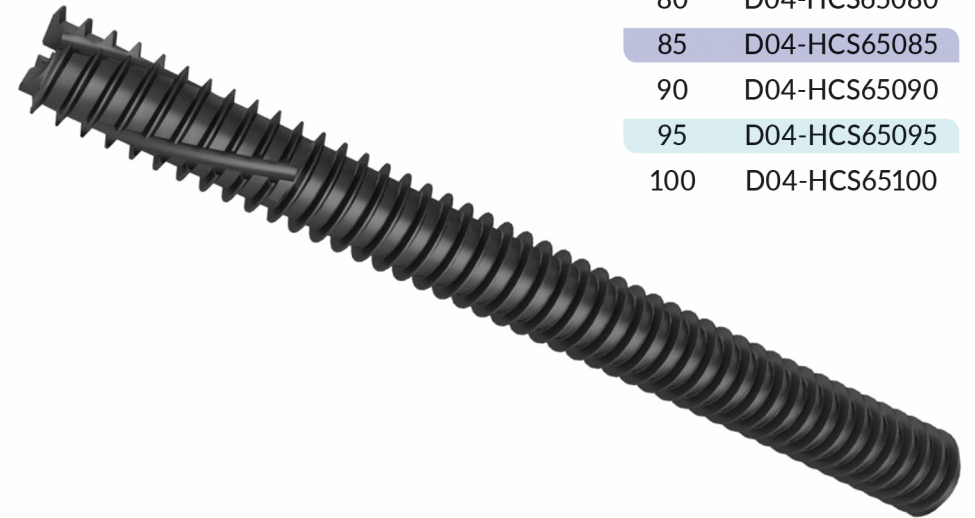

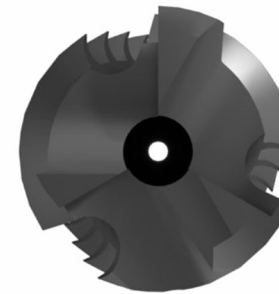

Holes	Ref. No.
31	D04-HCS4531
33	D04-HCS4533
35	D04-HCS4535
37	D04-HCS4537
39	D04-HCS4539
41	D04-HCS4541
45	D04-HCS4545
50	D04-HCS4550
55	D04-HCS4555
60	D04-HCS4560

6.5mm Headless Compression Screw

Designed for tibial plateau fractures, greater tuberosity fractures, femoral condyle fractures, hindfoot arthrodesis, triple arthrodesis, ankle arthrodesis, talonavicular fusion, subtalar fusion, calcaneocuboid fusion, TMT fusion and calcaneal osteotomy, 6.5mm Headless Compression Screw has ten different length options and 6.7mm distal area thickness.

As an important feature, cannulated design, provides the surgeons an easy application over a 2.0 mm guidewire.

- Made of certified Titanium Ti6AL4V Eli alloy.
- Proximal Width: 6.7mm
- Distal Width: 6.5mm
- Kirshner Wire: 2.0mm

Holes	Ref. No.
